

Fabio Di Cecca

Full-Stack Developer & UX/UI Designer

[Portfolio website](#) [GitHub](#) fabiodicecca@gmail.com [LinkedIn](#) +34711072412 Barcelona, ES

professional profile

Full-Stack Developer and UX/UI Designer with a background in architectural systems design. I specialize in bridging the gap between complex engineering and intuitive user experiences. From drafting product specs to deploying scalable microservices with TypeScript, React, and NestJS, I take true end-to-end ownership to build customer-focused digital products.

work experience

Senior Product Designer - Tourlane

Sep 2022 - Feb 2024 Berlin, Germany

- Owned complex product flows end-to-end, acting as the primary bridge between customer needs and technical implementation to successfully drive increased user engagement.
- Redesigned the core signup process and user journey, establishing the primary product flow that leads currently use to engage with the platform.
- Operated with high autonomy within Agile environments, iterating rapidly alongside engineering teams to deliver solutions that directly incremented lead conversion rates.
- Designed and prototyped solutions, successfully advocating for flexible, reusable design components that created leverage and accelerated future feature development.

UX Designer - Compugroup Medical

Sep 2021 - Sep 2022 Berlin, Germany

- Tackled significant product ambiguity by researching and defining concrete UX strategies for highly regulated healthcare software.
- Partnered closely with product management to align technical capabilities with long-term business goals.
- Delivered comprehensive wireframes and high-fidelity prototypes that resolved core usability issues for complex workflows.

Architect - Behnisch Architekten & Kadawittfeldarchitektur

June 2015 - August 2021 USA - Germany

- Led large-scale architectural projects requiring rigorous systems thinking.
- Demonstrated a track record of balancing complex technical constraints with high-quality design outcomes.
- Successfully managed, broke down, and tackled highly complex project lifecycles from initial concept to final execution.
- Collaborated extensively with multidisciplinary engineering teams to ensure structural and technical feasibility while maintaining the design vision.
- Expertly managed diverse stakeholders and navigated strict physical, budget, and regulatory constraints to ensure alignment and successful delivery.

projects

Portfolio [visit it](#) [github repo](#)

Project Highlight

- Architected and built a retro-futuristic single-page portfolio with Astro, Three.js, and Tailwind CSS v4, owning end-to-end execution from concept to deployment.
- Delivered a real-time 3D scene with Three.js featuring mouse-driven camera interaction, HDR environment lighting, and postprocessing effects (bloom, pixelation, scanlines, glitch) for an immersive user experience.
- Engineered a custom draggable window system with cascading layout, z-index management, and localStorage persistence; built a typewriter component, pixel-art cursor system, and markdown-driven content pipeline.

Mapdot - WORK IN PROGRESS [visit it](#) [github repo](#)

Project Highlight

- Developed a 3D terrain visualization tool with Vue 3 and Three.js that parses GIS elevation data and renders interactive point clouds with full camera navigation.
- Built a data pipeline to load, filter, and visualize large elevation datasets as spherical particle systems with OrbitControls and keyboard-driven camera controls.

Skypong [play it](#) [github repo](#)

Project Highlight

- Engineered a real-time multiplayer game entirely from scratch, operating as the sole owner of the product spec, UI/UX, and technical implementation.
- Developed the front-end and backend using Next.js, React, NestJS microservices, and PostgreSQL.
- Designed a robust, scalable architecture leveraging Docker, Colyseus WebSockets for real-time state synchronization, and a complete observability stack featuring Prometheus and Grafana.

Inception [github repo](#)

Project Highlight

- Architected a multi-container infrastructure leveraging Docker Compose, NGINX, MariaDB, and Redis caching.
- Demonstrated strong infrastructure-as-code principles, ensuring high performance, security, and reliable environment configurations.

education

42 School

Mar 2024 - Mar 2026 | Berlin, Germany - Barcelona, Spain

Completed an intensive peer-to-peer coding education program.

Built production-style distributed systems and comprehensive full-stack applications.

Thrived in a self-directed, project-based environment that required rigorous problem-solving, algorithmic thinking, and continuous peer code reviews.

Careerfoundry

Jul 2021 | Berlin, Germany

Completed an intensive UX Design Bootcamp.

Mastered user-centric design principles, including user research methodologies, wireframing, high-fidelity prototyping, and usability testing.

Università Sapienza

Jul 2014 | Rome, Italy

Master's degree in Architecture.

Developed foundational expertise in systems design, spatial reasoning, and comprehensive project management at scale.

Bauhaus University

Jul 2011 | Weimar, Germany

Erasmus program emphasizing Architectural Informatics.

Explored the intersection of digital technology, data structuring, and architectural design methodologies.

skills

full-stack engineering & infrastructure

TypeScript, JavaScript, C++, C, Python, HTML5/CSS3, React, Next.js, Node.js, NestJS, Tailwind CSS v4, Three.js, Babylon.js, Git, GitHub, Docker, Docker Compose, NGINX, Colyseus (WebSockets), PostgreSQL, MariaDB, Redis, Prometheus, Grafana.

product design, strategy & core competencies

Figma, Adobe Creative Suite, Graphic & 3D Design, UX/UI Design, Wireframing, Prototyping, Design Systems, User Research, Systems Thinking, Cross-functional Collaboration, Stakeholder Management, Complex Problem Decomposition, Agile Development, End-to-End Product Ownership.

languages

Italian, English, German, Spanish
